Certifications

Entrepreneurship and Business Essentials course by MTF Institute

Data Analytics using Power BI Bootcamp

Postman API Fundamentals Student Expert certification

Tata Group - Cybersecurity Analyst Job Simulation

National Finalist – Shri Ram Crisis Mania

Mujahid Kalanthar

BTech @MNNIT'28 | Full-Stack & Backend Development | AI/ML | Data Analytics

Prayagraj, Uttar Pradesh, India

Summary

I'm a B.Tech student in Electronics & Communication Engineering at MNNIT Allahabad, building production-grade systems at the intersection of Artificial Intelligence, Full-Stack Engineering, and Data Analytics. Over the past year, my technical work has grown from analytics dashboards into architecting end-to-end intelligent platforms. This includes PACE, a full-stack adaptive study planner combining a Gemini AI syllabus parser with a deterministic scheduling engine, and AuraVideo AI, a locally-runnable RAG pipeline that transforms YouTube videos and meeting recordings into a structured, searchable intelligence workspace using LangChain, ChromaDB, Groq Whisper, and Mistral AI. Alongside this, I've actively competed in national-level case competitions hosted by premier institutes including IITs, IIMs, IISc, SRCC, and NMIMS, with multiple podium finishes, 5 national wins, and 5 finalist placements across consulting, strategy, product, and analytics domains. These competitions directly feed into how I think about building products: with clarity on the business problem first, and precision on the technical execution second. I've also completed a Software Development internship at QTC - Quality Techno Certification, contributing to internal tooling, automation workflows, and collaborative development tasks. Currently deepening my expertise in:- Retrieval-Augmented Generation (RAG) & LLM Systems- Full-Stack Development (React, TypeScript, FastAPI, Supabase)- Data Science, Analytics & Business Intelligence- Product & Business-Oriented Problem Solving! I build things that are simple on the outside and smart underneath.
