

VoltEdge's 750 MW Solar-BESS Expansion Creates ₹37B Value and Enables 24/7 Renewable Energy

✓ Market Opportunity

- Rising electricity demand in India
- Corporate shift toward renewable energy
- Need for 24/7 renewable power supply

✓ Project Overview

- 750 MW hybrid solar + battery storage park
- Location: Rajasthan
- Total project investment: ₹18,000 Mn

Metric	Value
Project Cost	₹18,000 Mn
NPV	₹37,565 Mn
IRR	~23%
Payback	~4 years

Operating Leverage and Cost Efficiency Drive Strong EBIT Expansion

✓ Operating Cost & EBIT

Year	Op Cost	EBIT
1	1050	1150
2	1904	2746
3	2944	5056
4	3131	5769
5	3180	6220

✓ Key Insights

Rising capacity utilization and declining cost ratios significantly expand EBIT as the project scales.

✓ Profitability Drivers

- Capacity utilization rises 20% → 82%, increasing generation output.
- Operating cost ratio declines 35% → 30%, improving margins.
- Hybrid solar + BESS enables premium tariffs and reliable supply.

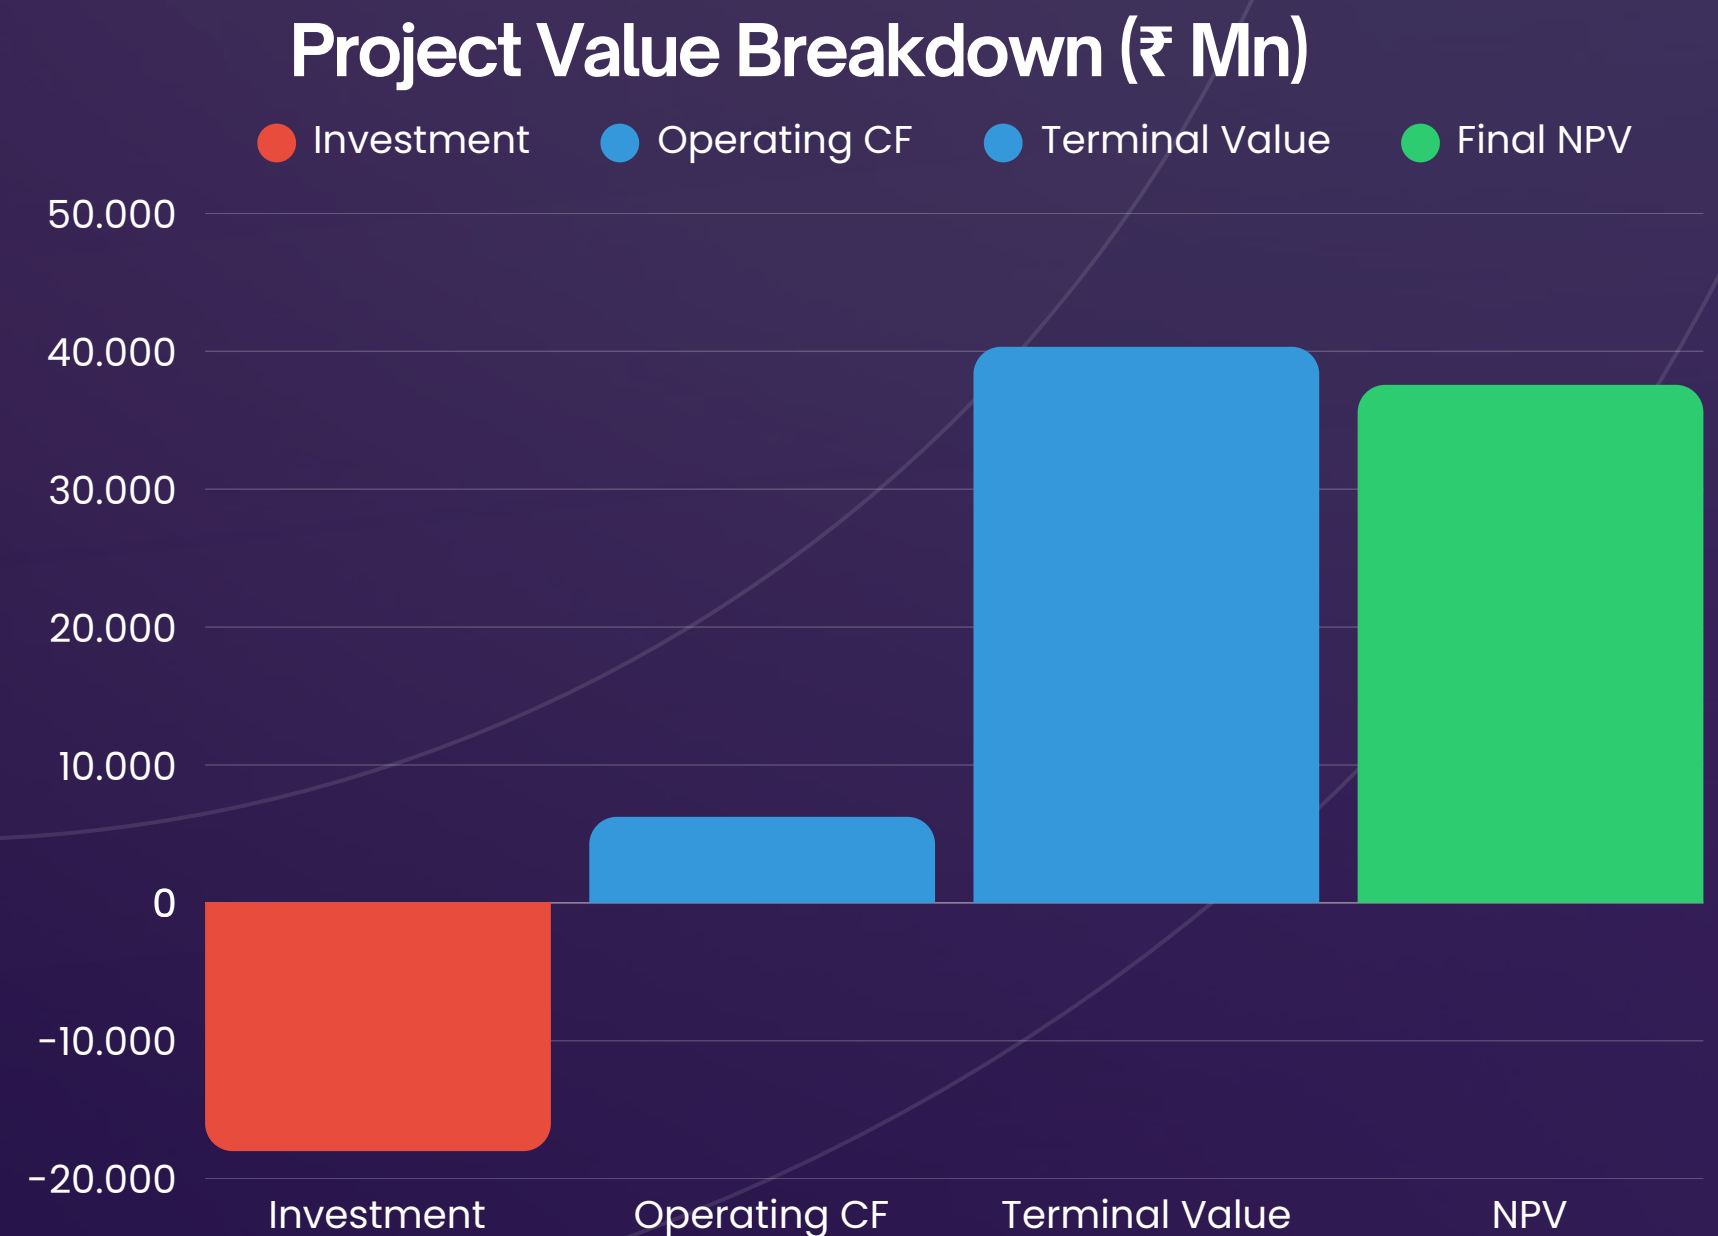

DCF Analysis Indicates Significant Value Creation

✓ FCFF Table

Year	FCFF (₹ Mn)
1	-4487
2	-120
3	4812
4	5481
5	5840

WACC: **11.6%** NPV: **₹37.6B** IRR: **~23%**

Terminal value contributes the majority of project value.

Optimizing Capital Structure and Assessing Financial Risk

✓ Capital Structure

Option	Debt	Equity	Impact
Option A	70%	30%	Lower WACC, higher financial risk
Option B	50%	50%	Lower risk, higher cost of capital

Recommended Capital Structure: 60–65% Debt

✓ Sensitivity Analysis

Variable	Change	Impact on NPV
Electricity Tariff	±10%	High impact
Capacity Utilization	±10%	Medium impact
Interest Rate	±2%	Moderate impact

Electricity tariff and capacity utilization are the most critical drivers of project profitability.

Strategic Financing and Risk Mitigation Strengthen Project Viability

VoltEdge should proceed with the 750 MW hybrid solar-BESS project, financed with 60–65% debt supported by green bonds and long-term PPAs, delivering strong financial returns and reliable renewable power.

Key Risks

- Interest rate volatility
- Electricity price fluctuation
- Technology cost changes

Risk Mitigation

- Long-term Power Purchase Agreements (PPAs)
- Fixed-rate financing
- Battery supplier agreements

Strategic Financing Options

- Green bonds
- Infrastructure Investment Trust (InvIT)
- Strategic equity investors
