

# SIP, But Make It Stick.

Building habits, not just portfolios.

# The SIP Retention Gap

- SIP adoption is rising rapidly, but average SIP duration is only 2.5–3.5 years, far below the ideal 5-year horizon.
- Early discontinuation prevents investors from realizing long-term wealth creation benefits and destabilizes long-term AUM for AMCs.
- The first year is the most fragile phase, where most drop-offs occur.

## Core Issue

SIPs fail not due to poor returns, but due to behavioral stress, impatience, and over-commitment.

# What Breaks the SIP Habit

The problem is psychological and situational, not financial literacy.

## Market Volatility Anxiety

Short-term market dips trigger panic and impulsive SIP stoppage.

## Short-Term Mindset

Investors expect quick returns and disengage when progress feels slow or invisible.

## Over-Commitment Stress

High ticket SIPs become unaffordable during income fluctuations, causing forced exits.

# A 4-Pillar Retention Engine

We redesign SIPs as a habit system, not just a financial product. Each pillar targets a specific dropout trigger.

## Pillar 1

Gamification & Positive Reinforcement

## Pillar 2

Behavioral Friction Against Panic Exits

## Pillar 3

Financial Flexibility During Income Shocks

## Pillar 4

Social Accountability & Long-Term Visualization

# Pillar 1 & 2: Psychology- Led Retention

**Fewer emotional  
exits, stronger first-  
year retention.**

## Gamification to Fight Impatience

- SIP streaks, progress bars, milestones, and badges (Duolingo-style).
- Market crashes reframed as opportunities:
  - “Flash Sale: You bought more units today.”
- “Diamond Hands” badges for staying invested during volatility.

## Friction-Based Exit Control

- “Stop SIP” replaced with “Request Reflection”.
- 48-hour cooling-off period for impulsive exits.
- Visual projection of Loss of Future Wealth if SIP is stopped.
- Optional self-reflection step to discourage panic decisions.

## Flexibility Without Breaking the Habit

- 1-Month SIP Bridge: Temporary support during income shocks so SIP streak continues.
- Smart onboarding questionnaire sets:
  - Minimum safe SIP amount
  - Auto-adjustable upper/lower bands
- Temporary 5-20% reductions allowed during turbulence, recovered later like EMI.

## Social & Visual Commitment

- Guilds / SIP Clubs ranked by consistency and discipline.
- Group accountability discourages individual drop-offs.
- Scroll-based future wealth visualization:
  - ₹X/month → 1, 2, 5, 10, 20, 30 years.

# Pillar 3 & 4: Flexibility + Social Lock-In

**SIP becomes part of  
identity, not a  
monthly expense.**

# Expected Outcomes

- **Higher First-Year Retention**
  - Reduced panic exits through behavioral friction and reassurance.
- **Longer Average SIP Duration (5+ Years)**
  - Flexibility prevents forced exits during income volatility.
- **Stronger AUM Stability**
  - Consistent inflows, fewer broken SIPs, better long-term compounding.

**When SIPs are designed for human behavior, not perfect discipline, retention becomes inevitable.**

**Mujahid**

**Praveen**

**Muhammad**

# OUR TEAM

VoltEdge is a multidisciplinary team of engineering students from MNNIT Allahabad, focused on structured problem-solving and clear decision-making. We identify overlooked real-world challenges and translate them into practical, scalable solutions through rigorous analysis and thoughtful design.
