Concierge

Reimagining Hotelzify's AI Sales Concierge for
High-Value Travelers

* Confidence-led bookings *

01

HIGH-VALUE TRAVELERS FACE DECISION FATIGUE

WHAT'S BROKEN TODAY

- Hotel booking is transactional, not consultative
- AI concierge is reactive, only answers questions
- Users face:
 - Too many room & rate options
 - No guidance on what's "right for them"
 - Low confidence → abandoned bookings

RESULT

- Long decision cycles
- Lost high-value bookings
- Only ~2% website conversion rate

02

INTENT-DRIVEN AI CONCIERGE VIA SMART ONBOARDING

Hotelzify's AI concierge begins with a lightweight, conversational intent-detection flow.

The AI asks up to 5 high-signal questions, one at a time:

- Purpose of stay
- Group size
- Decision urgency
- Date flexibility
- Primary priority (price, comfort, experience, convenience)

What the AI does next:

- Infers traveler type & intent
- Classifies user into a high-value segment
- Adapts:
 - Tone
 - Recommendations
 - UI elements
 - Call-to-actions

TO-BE JOURNEY

WHAT CHANGES

- AI becomes a trusted advisor, not a chatbot
- Users see:
 - Curated room options
 - Context-aware upsells
 - Clear next steps (chat → WhatsApp → call)

OMNICHANNEL CONTINUITY

- User starts on website
- Continues on WhatsApp
- Finalizes via voice call
- Zero context loss

What the AI does next:

- Reduced decision fatigue
- Faster conversions for high-value travelers
- Higher direct bookings for hotels
- Feasible to ship in <30 days (rule-based + lightweight ML)
